

# Number Systems

Grade 8  
ICT Lesson 1

A

=

65

=

0100 0001

**Letter**

**Code**  
(Decimal Value)

**Binary Number**

# What is a Number System?

- A number system is a way of representing numbers using specific symbols and rules.
- Humans use numbers for counting, calculating, and measuring.
- [Computers](#), however, use a unique numbering system called the **binary number system** to process information.

# Symbols and Base of a Number System

Every number system is defined by:

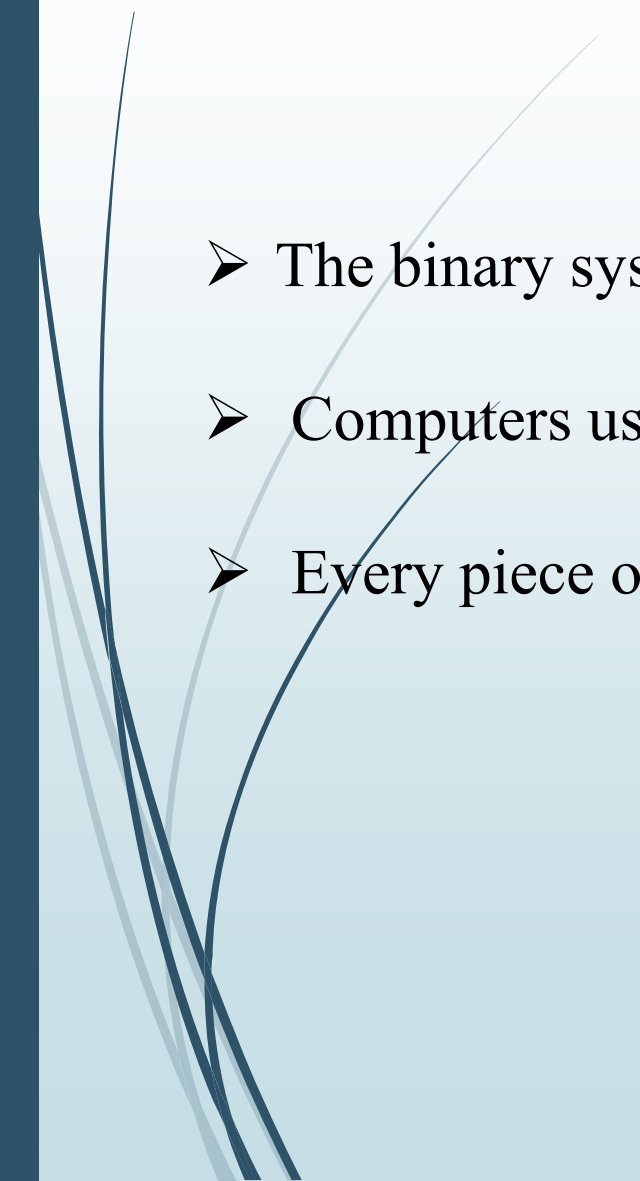

- 1.Symbols:** The digits used to represent numbers.
- 2.Base (or Radix):** The total number of unique symbols in the system.

Common Number Systems

Number System	Symbols	Base
Decimal	0, 1, 2, 3, 4, 5, 6, 7, 8, 9	10
Binary	0, 1	2
Octal	0, 1, 2, 3, 4, 5, 6, 7	8
Hexadecimal	0-9, A, B, C, D, E, F	16

# The Binary Number System

- The binary system is a base-2 number system that uses only two symbols: **0** and **1**.
  - Computers use binary because electronic circuits have two states: ON (1) and OFF (0).
  - Every piece of data a computer processes, from text to images, is represented in binary.
- 

# The Decimal Number System

- The decimal system is a base-10 number system that uses ten symbols (0 through 9).
- This is the number system humans use daily for calculations, money, and measurements.

# Converting Between Decimal and Binary

## 1. Converting Decimal to Binary

To convert a decimal number into binary, follow these steps:

- ☐ Divide the decimal number by 2.
- ☐ Record the remainder (0 or 1).
- ☐ Divide the quotient by 2 and repeat until the quotient becomes 0.
- ☐ Write the remainders in reverse order to get the binary equivalent.

## Example: Convert 13 to Binary

$$13 \div 2 = 6 \text{ remainder } 1$$

$$6 \div 2 = 3 \text{ remainder } 0$$

$$3 \div 2 = 1 \text{ remainder } 1$$

$$1 \div 2 = 0 \text{ remainder } 1$$

Binary equivalent: **1101**

## 2. Converting Binary to Decimal

To convert a binary number into decimal:

- ☐ Write down the binary number.
- ☐ Multiply each binary digit by 2 raised to the power of its position (starting from 0 on the right).
- ☐ Add the results.

## Example: Convert 1101 to Decimal

1	1	0	1
↑	↑	↑	↑
$2^3$	$2^2$	$2^1$	$2^0$
8	4	2	1
$8+4+1$			

Decimal equivalent: 13

# Practice Questions

1. Convert the decimal number **25** to binary.
  2. Convert the binary number **10101** to decimal.
  3. What is the base of the hexadecimal number system?
  4. Why do computers use the binary number system?
  5. How is text data represented in binary?
-
